

MCT- Sequential one

Sequential One is technically daring, highly complex but classically elegant. Every piece of the watch is manufactured in Switzerland and all assembly takes place in the MCT atelier in Geneva. The face of the watch is contemporary, featuring our patented prism display system and oversized hour numerals. The back of the watch reveals the mechanism with traditional Côtes de Genève decoration and a beautiful double hairspring escapement. Sequential One has a complicated mechanical hand-wound movement designed by Denis and his team. This MCT movement with over 471 parts is more complex to produce and calibrate than most tourbillons.

Informations techniques

REFERENCE

SQ 45 S1 WG S

FUNCTIONS

Sequential indication of the hour, seconds and jumping dial.

550 parts.

DESIGN

Mechanical, manual hand-winding.

471 Pieces. Each prism assembly has 50 components.
