

Urban Jürgensen – Chronometer Detent Escapement P8

First detent escapement for certified wristwatches

Born from the intense competition between the finest marine chronometer-makers, the first detent escapements appeared in the late 18th century. Extremely sensitive to shocks, this subtle mechanism was considered to be inapplicable to wristwatches. Our movement design engineers rose to the challenge and created a world first by successfully incorporating it within a calibre intended for Urban Jürgensen & Sønner (UJS08).

A chronometer duly certified both by the COSC and by Chronofiable®, it makes full use of the potential of an escapement with a pivoting detent: low energy consumption, extremely precise adjustments, rating regularity, excellent timing performances...
